I'm a full-stack software engineer with **4+ years of experience** building practical, scalable software that solves real-world problems. I've worked across **healthcare, SaaS, e-commerce, AI, real-time systems, and mobile applications**, turning ideas into reliable, production-ready products.

I enjoy understanding the problem first, exploring different approaches, and choosing the tools and architecture that best fit the solution. From designing systems and building products end-to-end to integrating services and improving performance, I focus on creating software that is **simple, thoughtful, and built to grow**.

My core experience includes **React, React Native, Flutter, Next.js, and Node.js**, with a strong focus on **system design, clean architecture, performance, and long-term maintainability**.

Professional Experience

Software Engineer. Graphland (Nov 2025 - Present)

- Working on Graphland products and platforms through Interspeed Digital Solutions.
- Developing and maintaining full-stack web applications and mobile applications.
- Contributing to system implementation, architecture, API integration, and technical problem-solving.
- Working with modern web and mobile technologies, databases, and deployment workflows.

Software Engineer. Interspeed (April 2024 - Present)

- Developed EMR, LIS, and Patient Mobile App using React, React Native, PHP & ExpressJS.
- Built WordPress AI chatbot plugin with shortcode & multi-provider support.
- Created COM port communication app (Node.js + Electron), Proxy plugin(Java), Load balancer.
- Integrated RabbitMQ, Docker, GitLab CI, and AWS for scalable deployments and System Design .

Software Developer. Bitpixel BD (Aug 2022 - April 2024)

- Built POS app, video calling, SaaS eCommerce, and real-time booking systems.
- Designed system architecture for scalable full-stack applications.
- Worked with React, React Native, Next.js, Node.js, NestJS, Docker, CI/CD, Elasticsearch, Redis.
- Gained experience in teamwork, system design, deployment, and full-stack project delivery.

Technical Capabilities

- **Frontend:** React, React Native, Next.js, Flutter, TanStack, Tailwind CSS.
- **Backend:** Node.js, NestJS, Express.js, Hono, Elysia, Fastify, PHP, Spring Boot (Java).
- **Databases & Storage:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, PocketBase, ChromaDB, Convex, Drizzle ORM, Prisma ORM.
- **Cloud & DevOps:** Docker, GitLab CI/CD, AWS (S3, EC2), Cloudflare, DigitalOcean, Nginx, Coolify, Dokploy.
- **Messaging & Integration:** RabbitMQ, REST APIs, GraphQL, WebSocket, Webhooks, MCP.
- **Testing & Development Tools:** Playwright, Postman, Swagger/OpenAPI, Git, GitHub.

- **AI & Automation:** LLM APIs, AI Chatbots, RAG, AI Integration, Inngest.
- **CS Fundamentals:** Data Structures & Algorithms, Problem Solving, System Design, API Design, and Clean Code.

Work Samples

StoreOS (GraphQL, NestJS, MongoDB, Next.js)

- Built a SaaS e-commerce platform that enables businesses to create and manage online stores with flexible product, content, and storefront management.
- Worked across the full-stack architecture, including GraphQL APIs, backend services, database design, and web application development.

Flame (MongoDB, RAG, Vector Search, AI)

- Built an AI-powered automation platform for Facebook messages and comments, helping businesses automate customer interactions using their knowledge base.
- Implemented RAG, vectorization, semantic retrieval, and AI-powered response generation to provide context-aware conversations.

Rm2.ai (React Native, AI, Health Intelligence)

- Contributed to a health intelligence platform designed to provide continuous visibility between doctor visits through wearable device data and mobile applications.
- Worked on mobile experiences supporting **health monitoring, alerts, medication and appointment reminders, analytics, and AI-powered assistance** through the Remy personal AI companion.

Marcopolo (PostgreSQL, GraphQL, NestJS, React)

- Developed a comprehensive hotel management system covering core operations including **inventory, HR, accounting, payroll, and management workflows**.
- Contributed to the system architecture and full-stack implementation, building scalable APIs and management interfaces.

LabQFusion LIS (NextJS, Express)

- Engineered a robust Laboratory Information System using Next.js, Express.js, MySQL, and RabbitMQ. Enabled labs to process medical tests efficiently, with automated scanner data input and AI-assisted analysis for rapid diagnostics and accuracy.

Quantumleap EMR (React Native, PHP, JavaScript)

- Developed a cross-platform mobile & web app using React Native, PHP and JavaScript. The system supports lab orders, patient management, medical test tracking, and handles multi-location, multi-organization setups with role-based access.

Degrees & Certifications

- B.Sc. in Computer Science & Engineering, Southeast University.
- Diploma in Engineering (Computer Technology), BIST.
